

Motivation Letter

Believe in yourself! Have faith in your abilities! Without a humble but reasonable confidence in your own powers you cannot be successful or happy."

These principles boost my confidence, making me believe my dream of studying medicine can come true. It's not just a profession; it's my passion. My interest in medicine sparked in the 9th standard when my uncle had a severe accident. The doctor initially thought his leg might need amputation, but our family doctor skillfully saved it through a challenging operation, inspiring me to become a doctor.

During the COVID-19 pandemic, doctors bravely faced challenges, risking their lives to treat patients. This dedication increased my attraction towards medicine.

To secure admission in medicine, I excelled in matriculation with remarkable success. This success fueled my ambition during my two years in college, consistently achieving success with 94%. After researching medical universities, Szeged Medical University, known for its excellent medical studies, caught my attention. I believe studying at Szeged University will provide me with the knowledge and skills needed to fulfill my dream of becoming a dedicated and proficient doctor.

"The chapter you are learning today is going to save someone's life tomorrow." Believing in this, I look forward to gaining knowledge in medical sciences, developing practical clinical skills, and exploring different aspects of medicine and dentistry at Szeged Medical University. I'm excited about the challenging academics, working with experienced faculty, and engaging in advanced research. My goal is to understand global healthcare and contribute meaningfully to the medical field using the knowledge and skills from Szeged University.

Studying in Hungary may have challenges like language and cultural differences. To get ready, learn basic Hungarian, understand local customs, and join orientation programs. Get involved in activities for social connections and manage homesickness by staying in touch with family. Plan finances, grasp healthcare, and secure housing early. Preparing ahead and seeking help when needed can help overcome these challenges while studying in Hungary. My study is important because it helps solve health problems around the world, especially in places that need more medical help. Globally, there's a big demand for skilled doctors and dentists, and my study is part of that. In my country and local areas, there's a need for better healthcare too.

I want to learn a lot to contribute to improving health in places that don't have enough support. Aside from studies, I'm active in sports and enjoy reading philosophy. Sports taught me teamwork and discipline, while philosophy broadened my understanding of emotions. These activities shape my character and provide essential skills for my journey into medicine. Participating in quizzes and scholarship tests is another interest. The challenge helps me improve problem-solving skills and keeps my curiosity alive. Achieving top

positions in these challenges reflects my dedication to academic success and competitiveness.

I think Szeged University is great because it helps students become well-rounded. I feel confident that it's the right place for me to learn and become better. I'm really excited about the opportunity to be part of the university community and contribute. Thanks for looking at my application. I hope to be part of Szeged University and do good things there.

Sincerely,

Anonymous
